

**THE WORLD'S LEADING
MILL ROLL
PRODUCTION BASE**

02

**TECHNICAL
EQUIPMENT**

The company possesses 8 melting facilities, including an Electric Arc Furnace for steel melting of 30tons, 45/70tons LF-VD Furnaces, Electric Slag Remelting Furnaces (10tons and 15tons), and medium frequency Induction Melting Furnaces (5tons, 10tons and 20tons). These melting facilities in total can accomplish a daily smelting capacity of 120tons molten steel, 240tons of molten iron and 25tons of electric slag remelting.

All the melting furnaces are automatically controlled by PLC with very good working conditions, they are equipped with automatic alarm system and furnished with perfect equipment for eliminating smoke and dust. All the raw materials for smelting are strictly controlled, the chemical composition are precisely tested to ensure the qualified melting process. Thereby, the refining process shows also excellent results.

It has two sets of horizontal centrifugal casting machines, with the maximum centrifugal cast roll size of Dia. 1400x3860mm Barrel Length. The centrifugal casting machines can realize the integration of spray coating and controlling the mould temperature. They are driven by hydraulic motor and operated steadily. The speed of rotation could reach 1500r/min, which can assure the technical requirement on gravity multiple accurately and confirm the best quality of working layer.

Forging Equipment

There is one set of 45MN Oil Hydraulic Press which can ensure the adequate ratio of forging reduction and deformation for forged rolls.

Heat Treatment Equipment

There are sixteen sets of car-type electric resistance furnaces and gas furnaces operating with high, medium and low temperature, two sets of differential heat treatment furnaces, one set of dual frequency induction quenching machine, two sets of spray quenching machines, one set of high-frequency hardening machine and two sets of deep freezing treatment troughs. All the furnaces are computer controlled, with the furnace temperature deviation less than 10 degree, which ensures very good uniformity of roll hardness.

Machining Equipment

There are 36 sets of machining equipment, including CNC lathes, CNC grinders, and CNC double-sided milling machines. The machining range can be dia.80x1000-dia.1600x8000mm and precision ranges up to 0.003mm.

Testing Equipment

The company has the most advanced inspection and testing equipments such as X-ray Fluorescence Spectrometer, Plasma Emission Spectrometer, Optical Emission Spectrometer (OBLF), Hydrogen/Oxygen/Nitrogen Combined Analyzer (LECO), Carbon/Sulfur Analyzer for chemical analysis, and also has Scanning Electron Microscope, Metallograph, Image Analyzer (Zeiss), Microhardness iTester, Universal Testing Machine, Impact Testing Machine, Analog and Digital Ultrasonic iTesting Device, Magnetic Powder UT Tester, Stress Meter, Portable Leeb & Shore Hardness Tester, etc. All these instruments and equipments can guarantee the Quality Assurance effectively.

Designation of rolls	Material code	Application
ZuS140CrNiMo	GS140	Small and medium steel, thick wire rod mill, hot strip rough roll, roller universal rolling mill
ZuS160CrNiMo	GS160	Small and medium steel, thick wire rod mill, hot strip rough roll, roller universal rolling mill
ZuS190CrNiMo	GS190	Small and medium steel, thick wire rod mill, hot strip rough roll, roller universal rolling mill

High - Chromium steel rolls

Chemical Analysis

Designation of rolls	Material code	C	Si	Mn	Ni	Cr	Mo
CS	HCrS	1.00-1.80	0.40-1.00	0.50-1.00	8.00-15.00	0.50-1.50	1.50-4.50

Physical Properties

Designation of rolls	Material code	Barrel hardness (HSD)	Neck hardness (HSD)	Tensile strength (Mpa)
CS	HCrS	70-85	35-45	≥450

Microstructure

tempered martensite+c.arbide sorbite				
--------------------------------------	--	--	--	--

Application

Designation of rolls	Material code	Application
CS	HCrS	Hot strip roughing and finishing work roll front, wide plate mill work roll; steel universal mill roll

High - speed steel rolls

Chemical Analysis

Designation of rolls	Material code	C	Si	Mn	Ni	Cr	Mo	V	W
HSS	HSS	1.50-2.20	0.30-1.00	0.40-1.20	0.00-1.50	3.00-4.00	2.00-3.00	2.00-3.00	0.00-2.00
S-HSS	S-HSS	0.60-1.20	0.80-1.50	0.50-1.00	0.20-1.20	3.00-9.00	2.00-6.00	0.40-3.00	0.00-3.00

Physical Properties

Designation of rolls	Material code	Barrel hardness (HSD)	Roll neck strength (Mpa)	Tensile strength (Mpa)
HSS	HSS	75-85	30-45	400-500
S-HSS	S,HSS	75-88	30-45	400-500

Microstructure

A small amount of tempered martensite+carbide+carbon				
--	--	--	--	--

Application

Designation of rolls	Material code	Application
HSS	HSS	Rolled strip, bar finishing roller, high speed wire pre-finishing, steel roller universal rolling mill, wide plate mill work roll
S-HSS	S-HSS	Rough rolling hot strip mill work roll, cold rolled strip steel work roll, Intermediate roll

	Specification	Material	Product code	Barrel hardness (HSD)
Finished frame mill roll, prefinished frame mill roll	◆2804550	High-performance high speed steel	LMM01	82-88
Cutting frame mill roll	◆2804550	High-performance segmentation high speed steel	LMM02	75-78
Pre-cutting frame mill roll	◆804550	High-performance segmentation high speed steel	LMM03	78-81
